

Name : _____

PYTHON ASSIGNMENT ACTIVITY

Q1

The print function in Python 3 is enclosed in parentheses ().

A. True

B. False

Q2

Lists in Python can be delimited by square brackets ([]), with the first element at index 0.

A. True

B. False

Q3

Python tuples are enclosed in parenthesis (()) and the internal elements are separated by semicolons(;

A. True

B. False

Q4

Continue statements in Python are used to skip the rest of the statements in the body of loop for the current iteration and jump to the beginning of the loop for next iteration

A. True

B. False

Q5

time.time() function can measure the number of seconds since the epoch as a floating point value.

A. True

B. False

Q6

Python author designed the restrictive syntax to filter out bad programming (like failing to add an indentation on the right of the next line of the if statement)

A. True

B. False

Name : _____

Q7

(Single-Answer Question) Which of the following lines properly starts a parameter less function definition?

- A. function func():
- B. def func:
- C. fun function():
- D. def func():

Q8

Functions are organised code segments which CANNOT be REUSED to implement single or related operations.

- A. True
- B. False

Q9

(Single-Answer Question) Which of the following is not a Python re regular expression module function?

- A. Match
- B. Compile
- C. Update
- D. Search

Q10

(Single-Answer Question) Knowing that a function named myFunc() resides in a module named myMod, choose the proper way to import it:

- A. import myFunc() from myMod
- B. import myFunc()
- C. from myMod import myFunc()
- D. from myFunc() import myMod

Name : _____

Q11

(Single-Answer Question) Which of the following Python identifier is INVALID?

- A. 1var
- B. var_1
- C. Var_1
- D. _var1

Q12

(Single-Answer Question) Which of the following is unchangeable in Python?

- A. List
- B. Tuple
- C. Array
- D. Set

Q13

(Multiple-Answer Question) Which of the following statements are TRUE?

- A. Python is often nicknamed “glue language” because it can easily glue together various modules developed in other languages.
- B. It was created by Guido van Rossum, the Dutchman, in 1989, and it was first released in 1991.
- C. Python is a kind of free and open-source software.
- D. The Python syntax is simple and clear, characterized by using blank characters for indentation.

Q14

(Multi-Answer Question) Python is an object-oriented programming language. Which of the following are Python objects?

- A. Function
- B. Module
- C. Number
- D. Character string

Name : _____

Q15

(Multi-Answer Question) Which of the following statements about Python index are true?

- A. Default index from right to left is numbered from -1.
- B. Default index from left to right is numbered from 0.
- C. Default index from right to left is numbered from 0.
- D. Default index from left to right is numbered from 1.

Q16

(Single-Answer Question) One of the following variables' names is illegal – which one?

- A. true
- B. tRUE
- C. True
- D. TRUE

Q17

(Single-Answer Question) An operator that is able to check whether two values are equal is coded as

- A. =
- B. ==
- C. ===
- D. !=

Q18

(Single-Answer Question) Which of the following is not a Python operator?

- A. Arithmetic operator
- B. Inference operator
- C. Logical operator
- D. Comparison operator

Name : _____

Q19

(Single-Answer Question) How many hashes will the following code snippet send to the console?

```
i = 0
while i <= 3 :
    i += 2
    print("#")
```

- A. two
- B. zero
- C. one
- D. three

Q20

(Single-Answer Question) Which of the following statements about Python regular expression is NOT true? ()

- A. re regular expression module was added in Python 1.5
- B. re module grants all regular expression functions to Python.
- C. re regular expression is a powerful tool to process strings
- D. re regular expression can only process character string data, not numerical data.

Q21

(Single-Answer Question) According to Python Enhancement Proposal (PEP) 8, how many spaces should the first line be indented by in Python? ()

- A. 1
- B. 2
- C. 4
- D. 8

Name : _____

Q22

(Multi-Answer Question) What are the numeric types of Python?

- A. int (integer type)
- B. long (long integer type)
- C. float (floating point type)
- D. complex (complex number type)

Q23

(Single-Answer Question) When a file is opened in read mode, it ():

- A. must exist (an exception will be raised otherwise)
- B. cannot exist (it has to be created every time)
- C. it will be deleted, if it exists
- D. it doesn't have to exist (it will be created if not present)

Q24

(Single-Answer Question) If you want to open a text file in append mode, you would use the following mode string:

- A. t+a
- B. at
- C. a+t
- D. at+

Q25

(Single-Answer Question) Assuming that the open() invocation has gone successfully, the following code snippet will:

```
for x in open('file', 'rt'):
    print(x)
```

- A. read the file line by line
- B. read the file character by character
- C. cause an exception error
- D. read the whole file at once.

Name : _____

Q26

(Single-Answer Question) What is WRONG description of the Python module?

- A. The Python module is a Python file that ends with .py and contains Python object definitions and Python statements.
- B. The Python module allows you to logically organize your Python code snippets.
- C. Python modules can define functions, classes, and variables, but the module does NOT contain executable code.
- D. Assigning relevant code to a module can make your code better and easier to understand.

Q27

The commonly used functions for mathematical operations in Python are basically in the math module and the cmath module.

- A. True
- B. False

Q28

(Single-Answer Question) What is WRONG with the introduction of Python module time?

- A. from time
- B. import time
- C. from time import*
- D. import time as t

Q29

(Multi-Answer Question) What are the advantages of Python?

- A. free
- B. simple
- C. high-level language
- D. rich library

Name : _____

Q30

(Multi-Answer Question) What are the Python language data types?

- A. list
- B. string
- C. tuple
- D. number
- E. dictionary

Q31

(Single-Answer Question) What is NOT the difference between Python 2 and Python 3?

- A. import
- B. print
- C. unicode
- D. xrange

Q32

(Multi-Answer Question) What operating systems does Python support?

- A. linux
- B. DOS
- C. Windows
- D. MacOS

Q33

Print in Python 3 must be used with ()

- A. True
- B. False

Name : _____

Q34

The components of Python identifier include: numbers, letters, and underscores

- A. True
- B. False

Q35

(Multi-Answer Question) The Python script execution model includes interactive mode and script mode

- A. True
- B. False
- C. 0
- D. Null

Q36

Python tuples are identified by “()” and internal elements are separated by “:”

- A. True
- B. False

Q37

(Multi-Answer Question) What are the advantages of Python?

- A. Beautiful
- B. Expensive
- C. Explicit
- D. Simple

Name : _____

Q38

(Single-Answer Question) What is the output of the following snippet if the user enters two lines containing 3 and 6 respectively?

```
i = input()
j = input()
Print (i + j)
```

- A. 9
- B. 36
- C. 6
- D. 3

Q39

(Single-Answer Question) The print() function can output values of:

- A. Any number of arguments (excluding zero)
- B. Just one argument
- C. Any number of arguments (including zero)
- D. Not more than five arguments

Q40

(Single-Answer Question) What is the output of the following snippet if the user enters two lines containing 2 and 4 respectively?

```
i = input()
j = int(input())
print(i * j)
```

- A. 24
- B. 8
- C. 2222
- D. 44

Name : _____

Q41

(Single-Answer Question) What is the output of the following snippet if the user enters two lines containing 3 and 5 respectively?

```
i = int(input())  
j = int(input())  
print(i + j)
```

- A. 5
- B. 3
- C. 35
- D. 8

Q42

(Single-Answer Question) Python regular expressions are a special sequence of characters that makes it easy to check if a string matches pattern.

- A. True
- B. False

Q43

(Single-Answer Question) Python language can use multiple statements on the same line, separated by commas.

- A. True
- B. False

Q44

(Multi-Answer Question) Python is a fully object-oriented language. Which of the following options belong to the Python object?

- A. Function
- B. Module
- C. Number
- D. Character string

Name : _____

Q45

(Multi-Answer Question) What quotation marks can the Python language use?

- A. Single quotes
- B. Double quotes
- C. Three quotes
- D. Four quotes

Q46

(Single-Answer Question) The Python list can be identified by "[]", and the default index of the first element from left to right is 1.

- A. True
- B. False

Q47

(Single-Answer Question) Which of the following is NOT the difference between Python 2 and Python 3?

- A. print
- B. unicode
- C. import
- D. Xrange

Q48

(Single-Answer Question) The commonly used functions for mathematical operations in Python are basically in the math module and the cmath module.

- A. True
- B. False

Q49

(Single-Answer Question) Python tuples are identified by "()" and internal elements are separated by ;

- A. True
- B. False

Name : _____

Q50

(Multi-Answer Question) Which of the following are the characteristics of the Python language?

- A. Explanatory
- B. Process oriented
- C. Object-oriented
- D. Dynamic data type

Q51

(Single-Answer Question) The timestamps in the Python language are represented by how long in seconds elapsed from midnight (epoch) on January 1, 1970

- A. True
- B. False

Q52

(Single-Answer Question) What are the results returned by the if conditional statements in the Python language?

- A. True
- B. 0
- C. False
- D. Null

Q53

(Single-Answer Question) The Python language can use the “#” at the beginning of a single line of code for code comments

- A. True
- B. False

Name : _____

Q54

(Single-Answer Question) Python authors deliberately design very restrictive grammars that make bad programming habits (such as the next line of if statement not indented to the right) cannot be compiled.

- A. True
- B. False

Q55

(Single-Answer Question) What are the steps that are NOT part of the operation of a Python file object?

- A. open
- B. delete
- C. read
- D. write
- E. close

Q56

(Single-Answer Question) The *for* loop statement in the Python language can iterate through the items in any sequence.

- A. True
- B. False

Q57

(Multi-Answer Question) About Python tuple which is CORRECT description?

- A. The difference between a list and a tuple is that the elements of the tuple CANNOT be modified.
- B. The list uses square brackets, and the tuple uses parentheses.
- C. Tuple creation is very simple, just add elements in parentheses and separate them with comma.
- D. When a tuple contains only one element, you need to add a comma after the element.

Name : _____

Q58

(Multi-Answer Question) Which is the correct description of the Python creation function?

- A. The function created starts with the def keyword followed by
- B. delete
- C. read
- D. write
- E. close

Q59

(Multi-Answer Question) What are the characteristics of Python code.

- A. Legibility
- B. Simplicity
- C. Rapidity
- D. Scalability

Q60

(Single-Answer Question) The constituent elements of the Python identifier include numbers, letters and underscores.

- A. True
- B. False

Q61

(Single-Answer Question) Which description is WRONG about the lambda function of the Python language.

- A. Lambda is just an expression, and the function body is much simpler than def
- B. The body of a lambda can be an expression or a block of code.
- C. The lambda function can access the parameters in the global namespace.
- D. The lambda function accepts only ONE parameter value.

Name : _____

Q61

(Single-Answer Question) The time interval in the Python language is a floating-point fraction in seconds.

- A. True
- B. False

Q62

(Multi-Answer Question) Which of the following descriptions about Python program are correct?

- A. The program consists of modules
- B. Module contains statements
- C. Statement contains an expression
- D. Expressions create and process objects

Q63

(Multi-Answer Question) What are the ADVANTAGES of Python?

- A. simple
- B. free
- C. high-level language
- D. rich library

Q64

(Single-Answer Question) Python script execution mode includes interactive mode and script mode.

- A. True
- B. False

Q65

(Multi-Answer Question) Which of the following features does Python support?

- A. inheritance
- B. heavy load
- C. derived
- D. multiple inheritance

Name : _____

Q66

(Single-Answer Question) Which of the following description about Python regular expression is NOT correct?

- A. Python has added the re regular expression module since version 1.5
- B. re regular expression module gives the Python language all the regular expression functionality.
- C. re regular expressions are powerful tools for working with strings.
- D. re regular expressions can only process string data, NOT numeric data.

Q67

(Multi-Answer Question) What are the application scenarios for the break statement in the Python language?

- A. Any Python statement
- B. *while* loop statement
- C. *for* loop statement
- D. Nested loop statement

Q68

(Single-Answer Question) Python dictionary is identified by {} and the internal data consists of the key and its corresponding value.

- A. True
- B. False

Q69

(Single-Answer Question) “print” in Python 3 must be used with “Queue”.

- A. True
- B. False

Q70

(Single-Answer Question) Which of the following is NOT a Python operator?

- A. Arithmetic operator
- B. Reasoning operator
- C. Logical operator
- D. Comparison operator
